

SOLOMON TECHNOLOGIES ELECTRIC PROPULSION

WHY KEEP THROWING MONEY AWAY AT THE FUEL PUMP?

PRODUCE YOUR OWN FUEL WHILE YOU SAIL.

Electric drive from Solomon Technologies regenerates electricity as your prop spins in the wake.

Our hybrid-electric system, with a backup diesel generator, can cut your fuel costs by two-thirds. Our battery-only system doesn't burn any fuel at all.

Saving fuel is just a side benefit of the Solomon Technologies system. Our electric motor drives turn a bigger prop and push more water than a diesel can with three to four times their horsepower rating. The result is more power and better control than you could ever get with a diesel.

Even better, you motor in silence. There's no engine roar, no smelly exhaust, no annoying vibration. The loudest noise you'll hear is other boats passing by.
